

Steel Dropin Internally Threaded Expansion Anchor

PRODUCT DESCRIPTION

The Steel Dropin is an all-steel, machine bolt anchor available in carbon steel and two types of stainless steel. It can be used in solid concrete, hard stone, and solid block base materials. A coil thread version for forming applications is also available.

GENERAL APPLICATIONS AND USES

- Suspending Conduit
- Fire Sprinkler
- Cable Trays and Strut
- Concrete Formwork

- Pipe Supports
- Suspended Lighting

FEATURES AND BENEFITS

- Internally threaded anchor for easy removability and service work
- Flanged (lipped) version installs flush for easy inspection and standard embedment
- Smooth wall dropin can be installed flush mounted or below the base material surface
- Optionally available with a knurled body
- Coil thread version accepts coil rod and typically used for concrete formwork applications

TESTING, APPROVALS AND LISTINGS

Tested in accordance with ASTM 488 and AC01 criteria FM Global (Factory Mutual) - File No. J.I. OK4A9.AH (see ordering information) Underwriters Laboratory (UL Listed) - File No. EX1289 (N) (see ordering information) CalTrans listing for "Shell Mechanical Expansion Anchors"

Installation Procedure

Drill a hole into the base material to the depth of embedment required. The tolerances of the drill bit used must meet the requirements of ANSI

Standard B212.15. Do not over drill the hole unless the application calls for a subset anchor.

Blow the hole clean of dust and other materials. Insert the anchor into the hole and tap flush with surface. Using a Powers setting tool specifically, set the anchor by driving the tool with a sufficient

number of hammer blows until the shoulder of the tool is seated against the anchor. Anchor will not hold allowable loads required if shoulder of *Powers* setting tool does not seat against anchor.

If using a fixture, position it, insert bolt and tighten. Most overhead applications utilize threaded rod. Minimum thread engagement should be at least one anchor diameter.

Nomenclature

- *d* = Diameter of anchor
- d_{bit} = Diameter of drill bit
- h = Base material thickness.
 - The minimum value of h should be $1.5 h_v$ or 3" min. (whichever is greater)
- h_v = Minimum embedment depth
- 1 = Overall length of anchor
- T_{max} = Maximum tightening torque

1. Tabulated load values are applicable to carbon and stainless steel anchors.

2. The values listed above are ultimate load capacities which should be reduced by a minimum safety factor of 4.0 or greater to determine the allowable working load. Consideration of safety

factors of 10 or higher may be necessary depending on the application, such as life safety or overhead. 3. Linear interpolation may be used to determine ultimate loads for intermediate compressive strengths.

2. Allowable load capacities are calculated using a safety factor of 4.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.

3. Tabulated load values are for anchors installed in the center of the flute. Spacing distances shall be in accordance with the spacing table for lightweight concrete listed in the Design Criteria. 4. Flute edge distance equals one-half the minimum deck width.

5. Anchors are permitted to be installed in the lower or upper flute of the metal deck provided the proper installation procedures are maintained.

DESIGN CRITERIA (ALLOWABLE STRESS DESIGN)

Combined Loading

For anchors loaded in both shear and tension, the combination of loads should be proportioned as follows:

$$\left(\frac{N_u}{N_n}\right)^{\frac{5}{3}} + \left(\frac{V_u}{V_n}\right)^{\frac{5}{3}} \le 1$$
 or $\left(\frac{N_u}{N_n}\right) + \left(\frac{V_u}{V_n}\right) \le 1$

Where: N_u = Applied Service Tension Load N_n = Allowable Tension Load

 V_u = Applied Service Shear Load

 V_n = Allowable Shear Load

Notes: For anchors loaded in shear, the critical edge distance (c_{cr}) is equal to 14 anchor diameters (14*d*) at which the anchor achieves 100% of load. Minimum edge distance (c_{min}) is equal to 7 anchor diameters (7*d*) at which the anchor achieves 50% of load.
